

## The Trusted LMS Partner for Federal, State, and Local Government.

### Trusted Partner

Meridian KSI has been a trusted LMS partner for numerous government agencies on the Federal, state, and local level since the company's founding. Over half the agencies in the Federal Government are Meridian client partners, as are ten states and all four branches of the military.

State and local government agencies are quickly discovering what the Federal Government has known since 1997: Meridian KSI is the LMS partner of choice. Meridian has extensive experience meeting the specific needs of government agencies at all levels, addressing issues of compliance, accessibility, and security, while delivering more effective training, more efficiently.

Meridian KSI is listed on the GSA schedule and FasTrac contracts, making it easy for your organization to get a world-class learning solution implemented as quickly as possible.

Some of Meridian's accomplishments for our Federal client partners include:

- **Development of the PBA Toolkit for GSA-OA:** Provides a complete performance support tool to train and assist in one of the most complex tasks in the acquisition world. Contextual best practices and key tips give targeted help at each step of the process.
- **Creation of the Air Force Training Record for AETC:** Meridian provided the Air Force with a next-generation competency modeling system that integrates, automates and streamlines all the transactions necessary for tracking the training for over 700,000 users.
- **Deployment of FAI Online University:** Over 400,000 acquisition community professionals take advantage of the online and instructor-led training and certification opportunities on this site. In its first two years, FAI Online University generated a return on investment of \$18 million.

Meridian also boasts extensive experience on the state and local level. Meridian has implemented its award-winning Knowledge Centre enterprise LMS suite for diverse agencies in ten different states and several local agencies — including the Ohio Bureau of Workers' Compensation, the University of California at Irvine, the Idaho and Texas Departments of Transportation, the Central Arizona Project, Wake County (NC) and a statewide deployment to over 88,000 users across the Commonwealth of Virginia.

The Knowledge Centre is particularly useful in support of public health and preparedness, supporting such organizations in Idaho, Montana, North Dakota, Texas, Washington and New York City. It can be used to rapidly disseminate information to first responders and medical professionals in response to emergency, or proactively to prepare for one.
